The metadata module

On the left hand are the metadata fields. Metadata fields are editable by clicking directly on the values. Note that metadata can be edited only on the last submitted version of the article.

Depending on the article type configuration, metadata can include:

- the date of receipt of this version
- the article title
- the authors list (in text, which may differ from the linked authors)
- standard categorizations
- custom fields
- free keywords
- Fundref information
