

Article types

Article types are the main entry point to configure the workflow. Article types may be created, updated, or deleted here:

The screenshot displays the NESTOR application interface. The top header includes the NESTOR logo, a quick search bar, and user information (RAIRO-THEOR. INF. APPL., ADMIN, ADMIN EDP, and a language selector). The left sidebar lists navigation options: Dashboard, Notifications, All Notifications, Advanced search, Saved searches, GENERAL SETTINGS (E-mail Templates, Automatic reminders, Admin Settings, Production transfer, Expertise fields), and ARTICLES MANAGEMENT (Article types, File Types). The main content area is titled 'ARTICLE TYPES' and features a '+ New Article type' button and a 'Columns' dropdown. Below this is a table of active article types:

Code	Name	Activated	Actions
Active article types			
REGULAR_ARTICLE	Regular Article	Active	[Edit] [Copy] [Delete]
COMMENT	Comment	Active	[Edit] [Copy] [Delete]
EDITORIAL	Editorial	Active	[Edit] [Copy] [Delete]

At the bottom of the table, there are search filters: 'Search Code', 'Search Name', and 'Search Activated' (a dropdown menu). A blue arrow points to the 'Article types' link in the sidebar.

Clicking on “Configure article type” (the little pen) will get you to the article type configuration, where the following options must be edited for any given article type:

- Information required to the authors at submission ([file types](#), [information fields](#), questionnaire)
- Due dates for authors and editors: this serve as a basis to compute the [status due date](#) and [reminders](#)
- The technical check, if any. When activated, articles with this article type will benefit from a special workflow
- The peer review: referee due dates, number of reports expected before taking take a decision
