3.80 - Author and referee rights

21 October 2022

Major updates

- You may now configure specific rights for authors and referees.
In the profile configuration, please have a look at these new pages and ensure they match your journal needs:

- In particular, settings related to peer review confidentiality have been transferred here:

AUTHOR PROFILE CONFIGURATION

VIEW ON VERSIONS

- [x] Can see all versions

If enabled, the author has access to all versions of the manuscript. If disabled, the author will only have access to the current version.

GENERAL INFORMATION

- [x] Has access to co-author module

If enabled, the author may check if the co-authors have validated their contribution to the manuscript.

PEER REVIEW INFORMATION

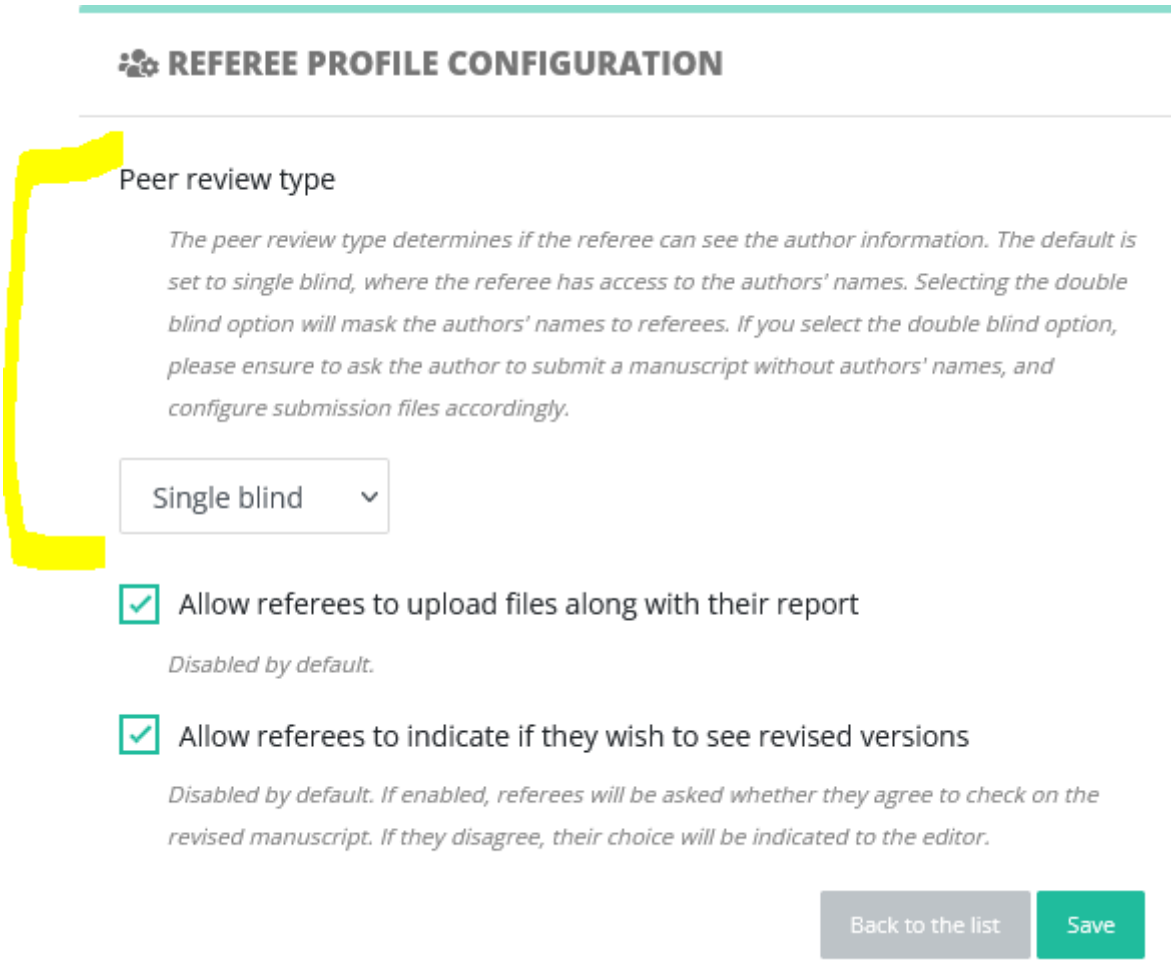

- [x] Can see the names of editors

If enabled, the author has access to the list of editors assigned to the manuscript. Editors' reports and decisions are identified.

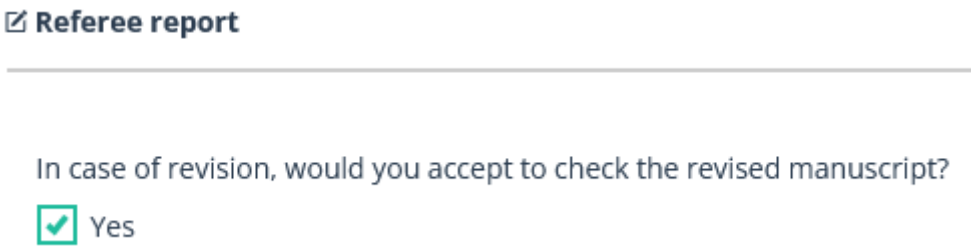

- [x] Can see the names of referees

If enabled, the author has access to the names of referees who reviewed the manuscript. Referees' reports will be identified.

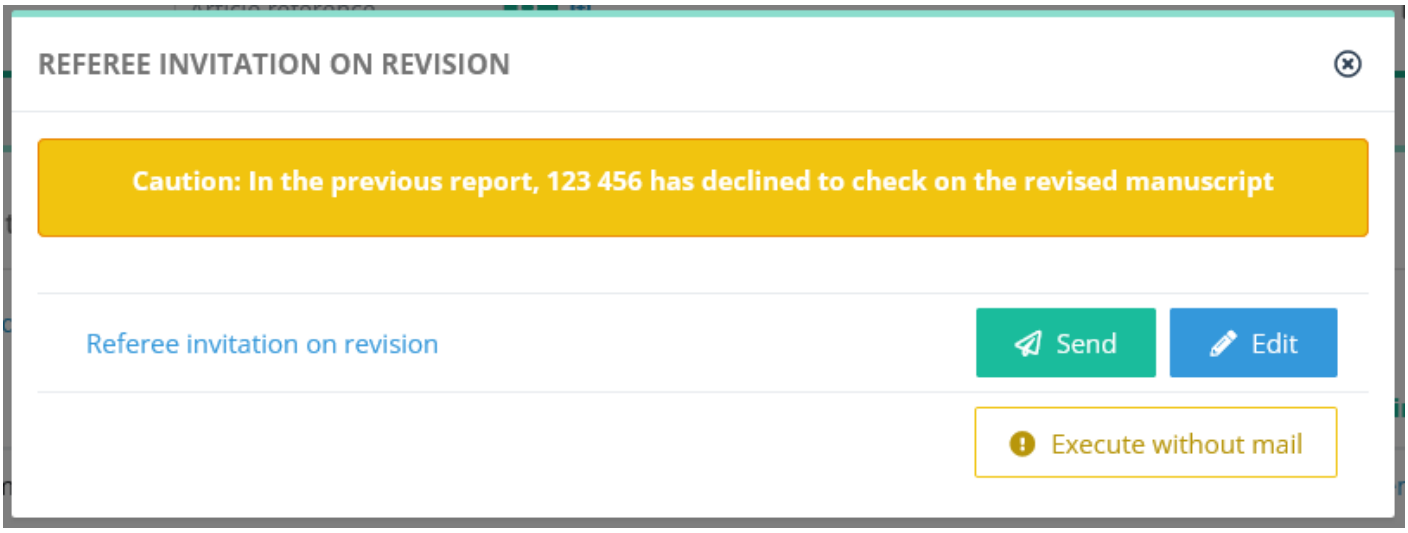

Back to the list | Save

- When uploading a report, referees may now indicate if they want to check revisions :

In case the referee refuses, the editor will be informed accordingly when handling the revised version:

Minor updates

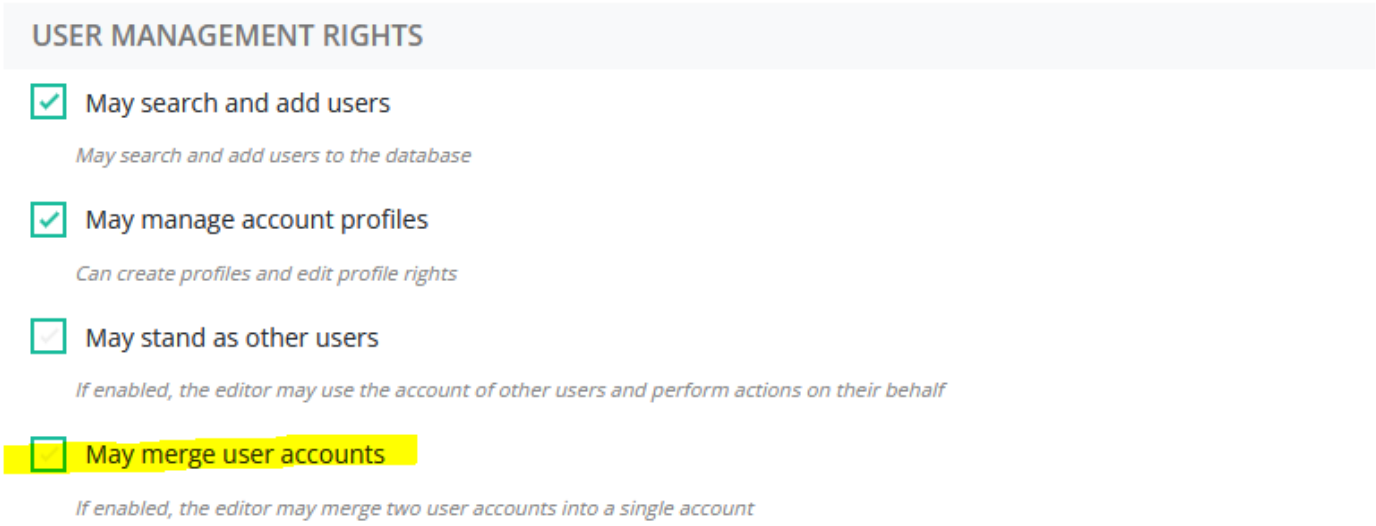

- On the Nestor home page, user registration has been secured to prevent registration by robots.

- When using quick search on a single reference, you will be redirected automatically to this reference.

- Template configuration and advanced search: Lists of events / statuses have been streamlined.

- The account merging feature has been secured by an editor right:

Revision #3
