5.10 - Quality of life updates

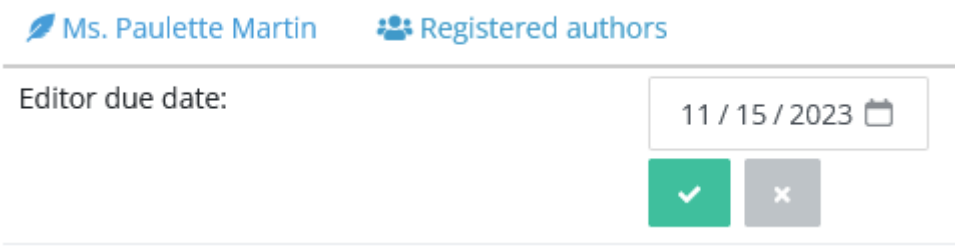

10 – 22 November 2023

General

- Submission: major upgrade of the unzip/LaTeX compilation utility (and more to come)
- Various language and typos corrections

Editor interface: view on articles

- Due date correction
  Setting due dates in the past is now possible.

- Extension of the revert action:
  To handle workflow corrections, more status transitions are now reversible.
  Final decision reset is now handled properly.

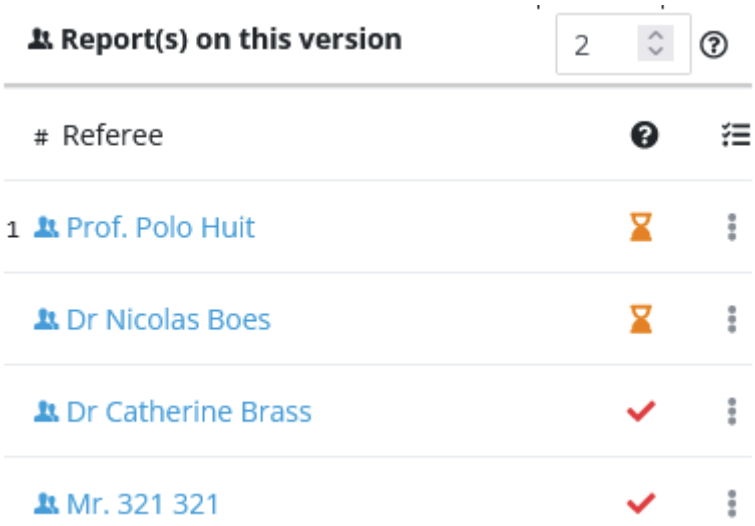

- Email management
  - Chrome: numerous fixes on mail pop-ups
  - Better handling of variable insertions and line breaks in e-mails (HTML & txt)
  - Mail history: added a third filter to mask automatic notifications to authors and

referees
- New mail variables (see template configuration):
- Registered co-authors
- Final decision date

- Referees and authors' deep links are now masked in the interface, and visible only by the recipient.

- Referee module
- Improved view on referee information (especially on small displays)
- More secure invitations
A few editors reported scenarios where they had access to the referee activity regarding their own articles: fixed

- View and edition of metadata during the proof validation workflow

---

Editor interface: view on article lists

- Update of the data table library: sorting/ordering/displaying
- Security has been tightened depending on the profile right "Global access": without this right, editors cannot find articles where they are not assigned.

Revision #2
