

5.20 - arXiv identifier, friendlier editing behaviours on the article page

6 December 2023

Adding the arXiv identifier

Authors may now submit their [arXiv](#) identifier when submitting their article.

The screenshot shows the 'EDIT YOUR ARTICLE' interface. At the top, there is a header 'EDIT YOUR ARTICLE:' followed by a navigation bar with seven tabs: '1. Article ty...', '2. Files', '3. Data', '4. Authors', '5. People', '6. ArXiv & Funding' (which is highlighted in green), and '7. Validation'. Below the navigation bar is a main content area with the following text:

By providing the arXiv ID, you will allow arXiv to add a link from the arXiv e-Print to the A&A published version of your article.

After you press the 'Check' button, the arXiv data will be displayed. You must then press the 'Confirm' button to confirm the arXiv ID.

Below the text is a form field labeled 'ArXiv ID' with a small icon to the left. To the right of the form field is a green button with a plus sign and the text '+ Add arXiv ID'. The arXiv logo is visible in the top right corner of the main content area.

To unlock this form, activate it in the [article type configuration](#).

If the author provides the arXiv identifier, this allows us to notify arXiv once the article is published, arXiv updates the preprint page with the publication information:

Abstract

The content of this page is blurred for privacy. It appears to contain the abstract and introduction of a research paper.

Comments: Accepted in A&A
 Subjects: **Astrophysics of Galaxies (astro-ph.GA); High Energy Astrophysical Phenomena (astro-ph.HE)**
 Cite as:

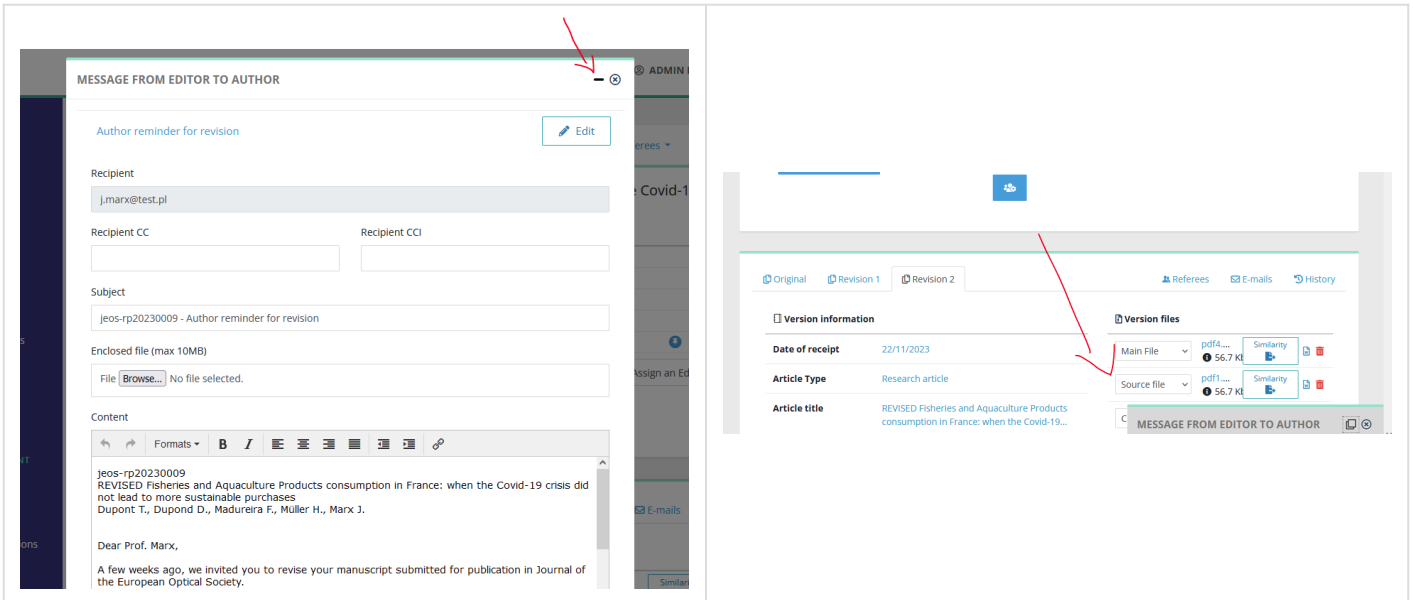

<https://doi.org/10.48550/>

Journal reference: A&A 679,

Related DOI: <https://doi.org/10.1051/0004->

Editing information on the article page

Clicking outside of fields being edited does not lose information any more. Those include metadata fields, and also mail pop-up windows. Those windows are now minimized, and the edited data is conserved:

Hiding referee reports and the editorial decision

The author profile configuration now provides an option to mask the decision module to the author.

Revision #6
