5.30 - Article lists: update on viewable / exportable columns

11 January 2024

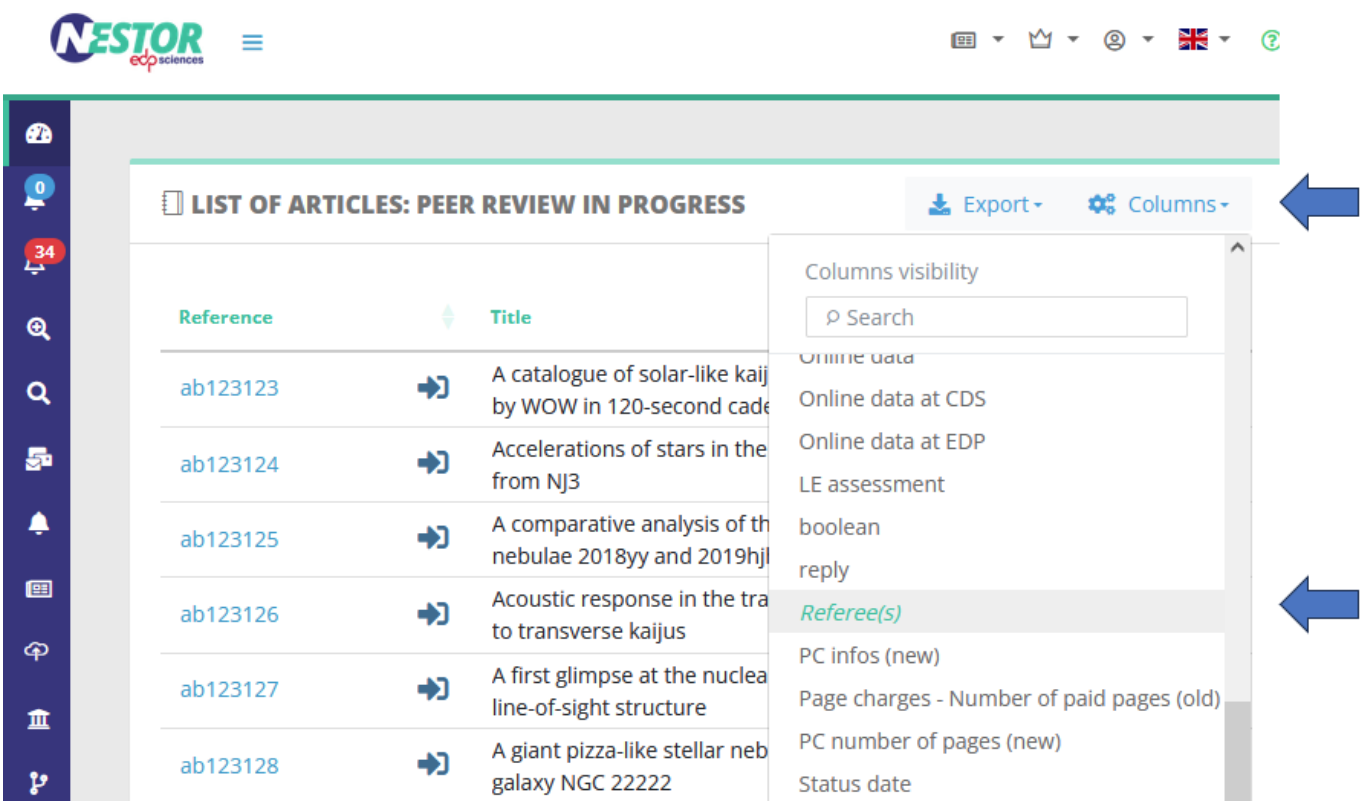

Article lists: the referee column

By default, articles lists now display a column dedicated to active referees:

The column is designed to provide relevant information (status and reminders) on referees currently working on the paper, thus helping editors to quickly scan urgent manuscripts.

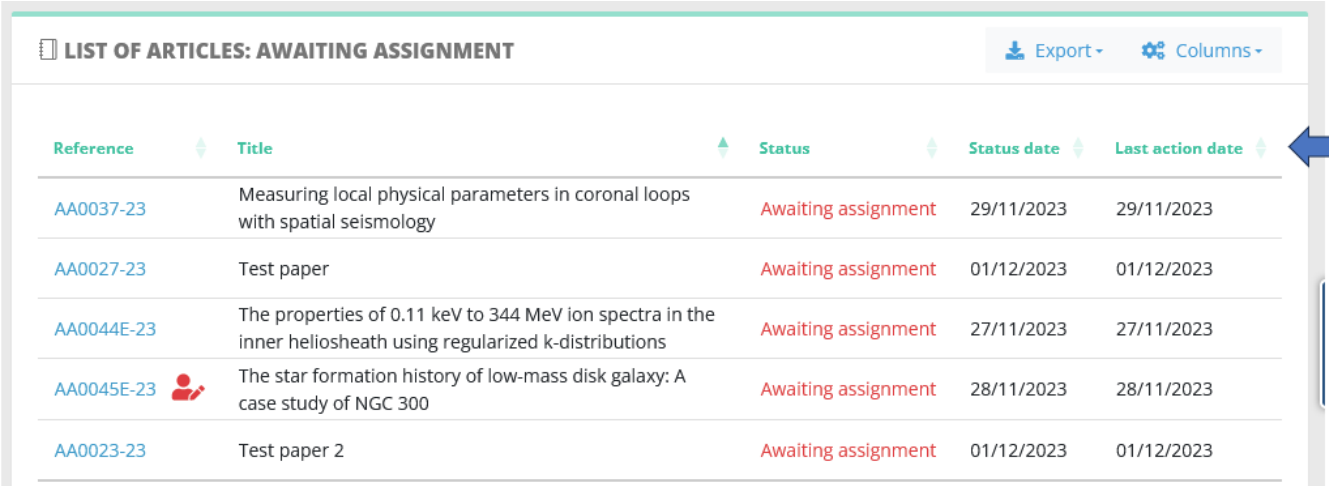

If your editors contact several referees on each article, they may want to disable this option in the column configuration:

Article lists: status date / last action date columns

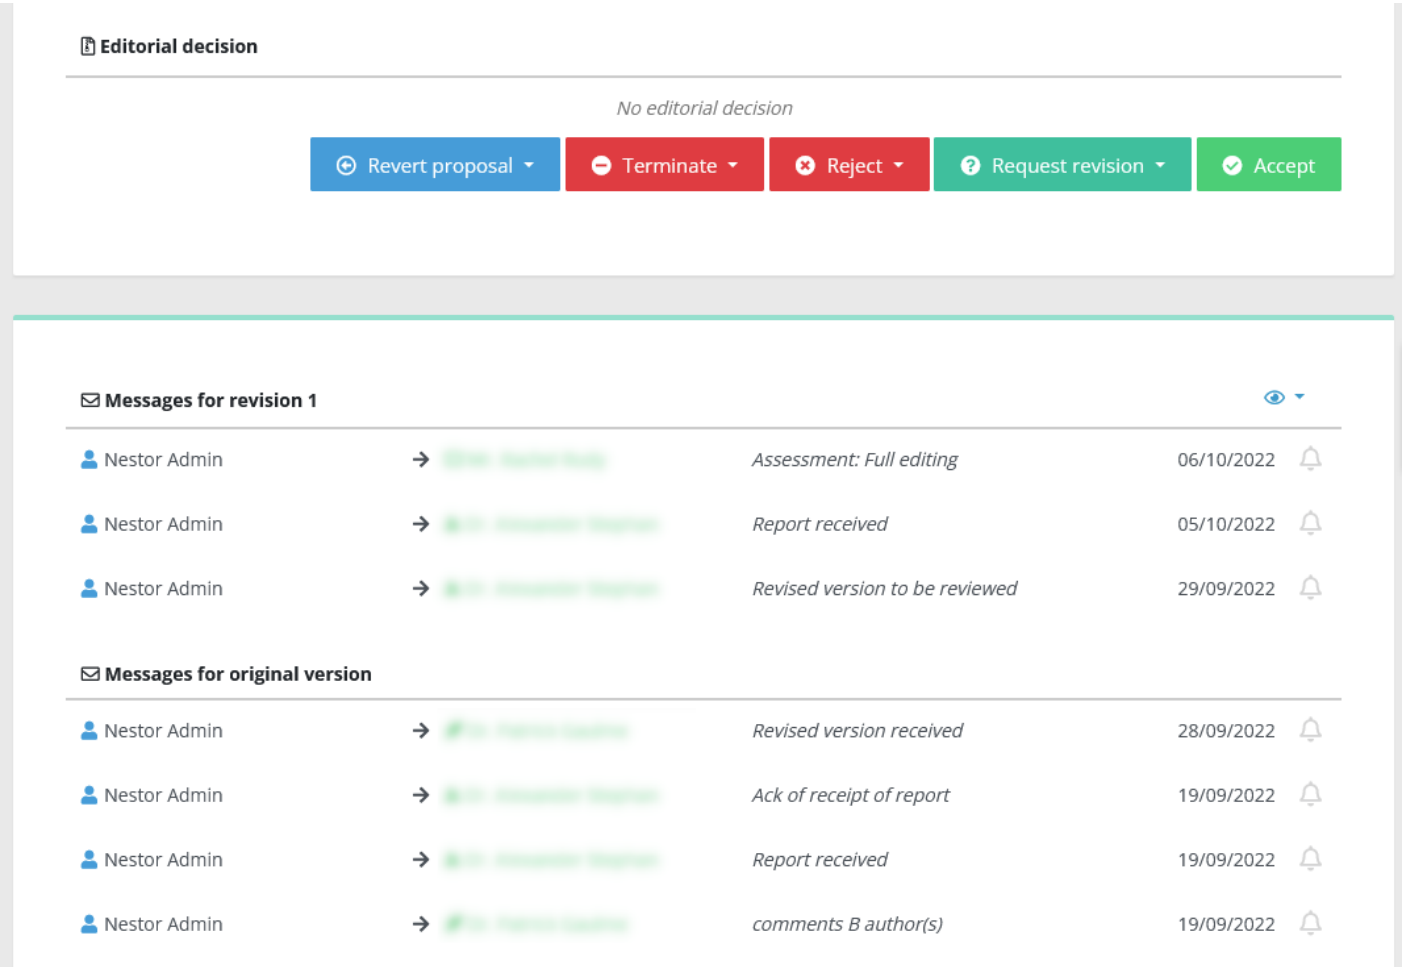

The former 'last update' column has been replaced by two different columns:

- The 'status date' is simply the date of arrival in the article status,
- The 'last action date' reflects the date of the last action taken on the paper, whether an action by the author, referee or editor.

Complete mail history on the article page

The complete mail history is now available as soon as the article is loaded.
