

# 5.50 - Landing pages, secure deep links, article history for authors, production workflow

21 March 2024 [ ] [ ] [ ] [ ] [ ]

---

## Landing page behaviour

The behaviour of Nestor at login has been refined according to your profile and activity. Depending on the following priorities, you will either land on the author, referee or editor dashboard:

- If you are editor of the journal, you will always land on the editor dashboard
- Otherwise, if you have pending articles as referee, landing on the referee dashboard
- Otherwise, if you have active articles as author, landing on the author dashboard
- Otherwise, if you have active articles as coauthor, landing on the coauthor dashboard
- Finally, if none of the above apply, you will land on the author dashboard.

This behaviour will help people to easily identify actions they have to undertake.

---

## Secure deep links

Referees and co-authors are the people likely to receive invitations via Nestor [deep links](#). When using those, users will now be restricted to the action page they are invited to. If they want to check their whole Nestor activity, those users will be prompted to log in, using their credentials.

---

# Disconnection warnings, autosaved referee reports

Nestor will now warn you if you have been disconnected while performing an action. This will help prevent data loss.

**! ERROR:** You have been disconnected! Would you please open a new tab and login again to continue. x

If a revision is necessary, are you willing to review the updated version?

Yes

**Detailed scientific report to be communicated to the author(s) (NB: do not identify yourself) \***

This is an auto-saved report :)

**Report File (optional)**

*Caution! If you attach .doc or .pdf files, make sure that your name or initials do not appear in the document properties. Otherwise, your anonymity is not guaranteed.*

Referee report  
Maximum file size: 60Mo

[Browse files](#)

In the same vein, referee reports are now saved automatically during the course of the drafting.

# Article history now available to authors

Authors now have access to a summary of the article history. For the moment, only statuses relevant to authors are displayed.

# New production statuses

The production workflow has been refined again with three new statuses, triggered by specific actions. This will help authors and editors to get a better understanding of the article history during the production process.

Action	Old status	New status
<b>Author sends corrections on proof</b>	--> In production	<b>Proof correction</b>
<b>EO sends corrections on proof</b>	--> In production	<b>EO proof correction</b>

<b>EO validates proof</b>	--> In production	<b>EO proof validation</b>
---------------------------	-------------------	----------------------------
