

5.70 - File renaming, author view on article history

10 June 2024

Automatic file renaming

Note: a very cool feature, which must be first activated in the [file type configuration](#).

The screenshot shows the 'File Types' configuration page in the Nestor admin interface. The 'Automatic renaming' checkbox is checked, and the 'File extensions locking' section is visible with a list of allowed extensions: *doc, *docx, and *odt. The default file name format is shown as `{{article.reference}}_rev{{revision.version}}_main_file`.

This new feature allows you to automatically rename author-submitted files according to their file types. This will be extremely useful for editors and referees, to identify author files downloaded from Nestor at a glance!

For instance: let us assume a journal named 'geo', requiring the following files at submission. In 2024, an author submits the 33th paper of the year. His files can be automatically renamed as so:

File type	Original file name (by author)	Automatic Nestor renaming ♥
PDF manuscript	mypaper.pdf	geo240033_ms.pdf

DOC source file	manuscript.doc	geo240033_source.doc
Cover letter	editor.doc	geo240033_cover.doc

You can totally use variables to rename files according your specific criteria! (reference, version, author name etc).

Author access to the article history

Following 5.50, authors now have a wider access to the article history, seeing more statuses and even some actions related to referees (whose identities always remain undisclosed). The display of the page below is still simple and will be improved shortly.

[Original version](#) [E-mails](#) [Status history](#)

History for Original version

Context	Date	Label
Article Status	10/06/2024	Peer review in progress
Article Action	10/06/2024	Accepts invitation
Article Status	10/06/2024	In search of referee
Article Action	10/06/2024	Sends invitation to referee
Article Status	10/06/2024	With editor

Referees reminder counter

The reminder counters and the last reminder date will now be reset when referees switch status,

Invited referees

# Referee	Invitation Date	Status
Dr. Nestor Admin	04/06/2024	2 reminders sent Last reminder: 10/06/2024 Answer pending

from 'Answer pending' to 'Report expected'

Invited referees

# Referee	Invitation Date	Status
Dr. Nestor Admin	04/06/2024	Report expected

Template variables

The code of template variables underwent a thorough cleaning. This impact email templates and XML generation, making them easier to maintain.

QoL updates

User creation

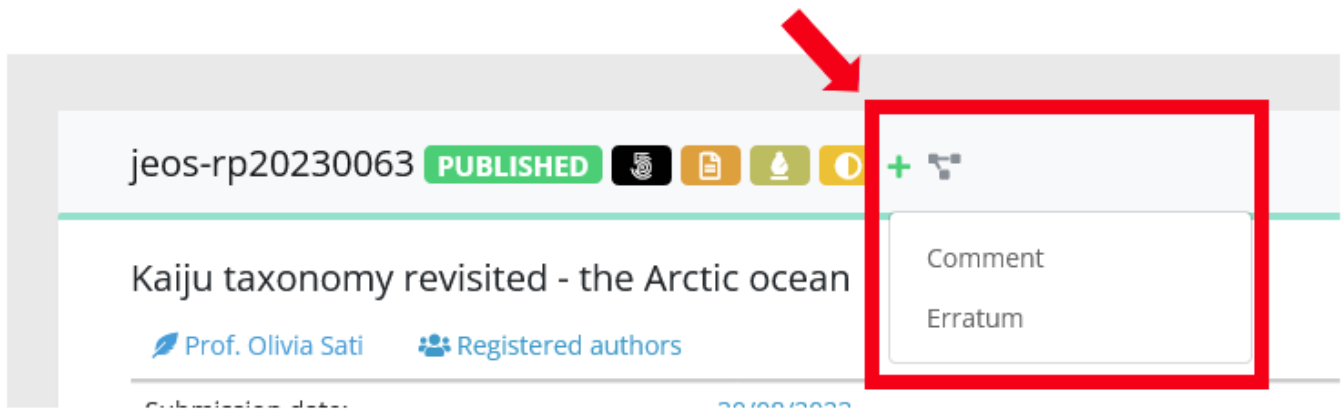

In the back office, creating a new user will redirect you to the newly created user page (finally!!!).

Erratum/comment creation

In the back office, when creating a child article: the metadata from the parent article will not be copied extensively (especially custom fields). Only the following fields will be copied:

- Title
- Section
- Text authors list
- Country

- Expertise fields
- Keywords

The screenshot shows the top section of a document page. At the top left, the identifier "jeos-rp20230063" is displayed next to a green "PUBLISHED" badge. To the right of the badge are several small icons: a black square with a white '5', an orange document icon, a green flame icon, and a yellow circle with a white 'D'. Further right is a plus sign icon and a share icon. A red arrow points from the top center towards the plus sign icon. A red rectangular box highlights a dropdown menu that is open, showing two options: "Comment" and "Erratum". Below the header, the title "Kaiju taxonomy revisited - the Arctic ocean" is visible, followed by the author information "Prof. Olivia Sati" and "Registered authors".

Revision #5
