

7.60 - Assignments strategies

01/09/2026

Automatic assignment strategies

The automatic assignment feature has received a long-awaited makeover! The old configuration settings (article type/section/topical) have been discarded to make room for a dedicated page:

	Criteria	Value	Assigned editors	Actions
1	Topical issue	AKARI	Nicolas Boes, Catherine Bras, Vasili Estie	 
2	Section	3. Cosmology (including clusters of galaxies)	Pascale Menon, Thierry Lafronde	 
3	Article type	regular paper	Nargiss Khessassi  Rachel Rudy	 
	Article type	editorial	Thierry Lafronde	 

When an article lands in the status "Awaiting assignment", Nestor will check the strategies defined here and apply them if the criteria are met. The goal is to quickly dispatch articles to relevant editors based on the article metadata, thus saving many clicks to Editorial Offices. The dispatch criteria can be any [standard](#) or [custom field](#).

Strategies are sorted by priority, with upper strategies having higher priority. As soon as a criteria is met, the strategy is applied, and lower strategies are ignored.

For example in the screenshot above, a paper with:

- no topical issue
- in section "3. Cosmology"
- and which is a regular paper

will match the second strategy and be dispatched to Pascale and Thierry.

No strategy is provided by default, it is entirely up to you to decide which strategy you can apply to your journal.

Strategies and filiation links

For a given strategy, multiple editors can be assigned on the fly:

NEW ASSIGNMENT STRATEGY

Assignment criteria *

The criterion is assessed at time of submission/technical check, only on the first version.

Topical issue

Trigger *

Special issue - Science in motion

Assigned editor(s) *

*When trigger is met, editors will be assigned in the order defined below (from left to right).
Responsibility tags are applied as usual: the rightmost editor will therefore always be current (= responsible for moving the article forward)*

× Nicolas Anelka

× Jean-Michel Lapointe

× Bob Leponge

Back to the list

Save

This is extremely useful to assign several affiliated editors to handle e.g. a special issue:

Editor-in-Chief > Associate Editor > Guest Editor (who is [current](#))

In that example, the Guest-Editor will be responsible for handling the peer review, and his [decision proposal](#) can be subject to validation by his parent editor (in the screenshot above: the Associate Editor).

New action: skip assignment

The technical check sometimes lead to EICs being stuck at the assignment step. This new action will unlock the situation:

Test article

Profile configuration: visibility on other profiles

Profile configuration has been made easier thanks to the implementation of this new column:

 EDIT EDITOR PROFILE - EDITOR-IN-CHIEF General settings Article workflow rights Article information visibility☒ Manage editor assignment

Can assign and manage editors. Enabling this option will also display the "Awaiting assignment" status in the user's to-do list (personal dashboard).

Configure profile visibility

This setting affects the assignment menu and the global dashboard (when relevant).

Can be seen by

- ☒ Editor-in-Chief
- ☒ Associate editor
- ☒ Guest Editor
- ☒ Main Language Editor
- ☒ Language Editor
- ☒ Editorial assistant
- ☒ test profile
